Krale - The Moon Also Rises [Free Download] - SoundCloud

The Phases of the Moon. By Vigdis Hocken. Half of the Moon's surface is always illuminated by sunlight. However, just how much of that light we can see from our point of view on Earth varies every day and this is what we refer to as a Moon phase.

Phases of the Moon - Time and Date

The Moon was first visited by the Soviet Union's uncrewed Luna 1 and 2 in 1959, and, as of April 2019, seven nations have followed. The U.S. sent three classes of robotic missions to prepare the way for human exploration: the Rangers (1961–1965) were impact probes, the Lunar Orbiters (1966–1967) mapped the surface to find landing sites, and the Surveyors (1966–1968) were soft landers.

In Depth | About the Moon – Moon: NASA Science

Full Moon: During the Full Moon, the Sun lights up the entire surface of the Moon that faces Earth. It rises just as the Sun sets and disappears beneath the western horizon when the Sun rises the next morning. This is the brightest phase of the Moon and it washes out the nearby part of the sky, making it difficult to see stars and faint objects such as nebulae.

Today's Moon Phase

The Moon's Variation in Distance and Speed Although the Moon has an average motion of 13.2 degrees per day, this motion varies for two reasons. First, the orbit of the Moon is an ellipse and is not centered on the center of the Earth, but on a point about 12000 miles from the center of the Earth.

The Motion of the Moon - cseligman.com

Throughout the Lunar Cycle, the Moon will appear further (eastward, westward) in the sky at the same time each day. Therefore, to an earthbound observer, the time of day when the Moon is highest in the sky becomes progressively (earlier, later).

Cycles of the Moon Flashcards | Quizlet

It's also the closest astronomical object by far. The Moon's Motions. The moon's motion through our sky is similar to that of the sun, but different: Like the sun, the moon rises in the east and sets in the west (with some exceptions for observers in earth's extreme northern and southern regions).

Understanding Astronomy: The Moon and Eclipses

Our Moon is like a desert with plains, mountains, and valleys. It also has many craters, holes created when space rocks hit the surface at a high speed. There is no air to breathe on the Moon. The Moon travels around the Earth in an oval shaped orbit. Scientists think the Moon was formed long, long ago when Earth crashed into a Mars-sized object.
