Reading this rule from right to left tells us that if we have a problem to factor and if it is in the form of $a^2 - b^2$, the factors will be $(a - b)(a + b)$. Solution. Here both terms are perfect squares and they are separated by a negative sign. Where $a = 5x$ and $b = 4$.

Factor a polynomial or an expression with Step-by-Step ...

Explanation: . This is a factoring problem so we need to get all of the variables on one side and set the equation equal to zero. To do this we subtract from both sides to get Think of the equation in this format to help with the following explanation.
